

# DDoS Mitigation Solutions - A vendor neutral approach

## Around-the-clock protection & business continuity - to suit you

As a market leading anti-ddos specialist, activereach offers a vendor neutral approach to DDoS mitigation. Our best-in-class solutions allow businesses of all sizes to detect and mitigate the full spectrum of today's complex DDoS attacks. We offer a range of scalable technology solutions, from cloud based prevention for SMEs to the most critical always-on enterprise-level mitigation.

If in doubt about which solution might be right for you, please speak to an activereach DDoS Mitigation Specialist.

## activeDEFENCE Cloud-based DDoS Mitigation for SMEs

Historically, always-on DDoS mitigation has been beyond the budget of SMEs, even with performance-critical web application servers to protect. activereach's Cloud-based DDoS Mitigation Solution for SMEs combines high performance always-on DDoS mitigation capabilities with a powerful web-application firewall and performance-enhancing content caching in a single service, at a fraction of the price of traditional carrier-class DDoS mitigation solutions.

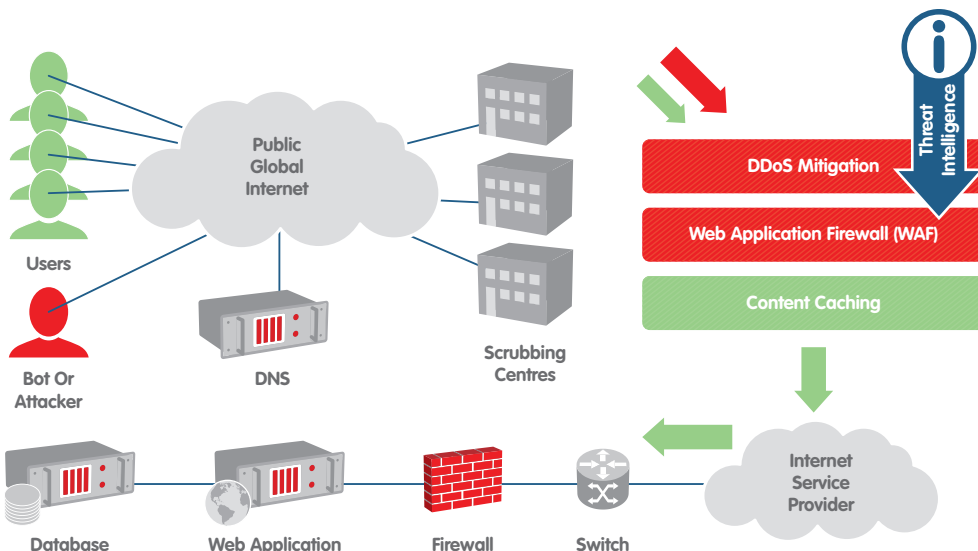

### HIGH LEVEL FEATURES

- World-class DDoS mitigation and SSL protection
- Real-time attack management, monitoring & reporting
- Scalable and cost-effective deployment models, designed to suit you
- Consultancy, configuration and support for complex mitigation installations
- Single point-of-contact for multi-vendor solutions

Q1 2015 set a record for the number of DDoS attacks with a doubling in the number of attacks compared with Q1 2014. The average duration of a DDoS attack was 25 hours

## activeDEFENCE Hybrid DDoS Mitigation Solution

Increasingly, criminal gangs are using a wide range of rapidly shifting DDoS attacks to probe DDoS mitigation systems for weaknesses which can then be exploited. For comprehensive protection from volumetric, protocol and application-based attacks, activereach offers a sophisticated hybrid of on-premise mitigation devices and cloud-based flood defences to provide defence-in-depth. This is a highly suitable solution for those businesses that are in high-risk categories for DDoS attacks.

## activeDEFENCE Cloud-based DDoS Mitigation for Enterprise

Critical infrastructure providers, service providers and larger enterprises demand always-on DDoS mitigation services that can defend their servers and networks against the growing size of amplified volumetric attacks, as well as the rapidly changing nature of application-level attacks. activereach's Cloud-based DDoS Mitigation for Enterprise offers global flood defences capable of dealing with 400 Gbps+ volumetric attacks.

## activeDEFENCE DDoS Mitigation Devices and Professional Services

Telcos and service providers, hosting and data centre providers as well as IaaS/SaaS companies & others, often do not have the necessary expertise in DDoS mitigation devices in-house to adequately protect medium to large scale multi-tenant networks or servers for their customers. activereach's dedicated DDoS Mitigation Engineers can provide, configure and support complex DDoS mitigation deployments across a range of vendors (a10, Radware, Corero etc.), allowing service providers to focus on their core business.

## Related activereach products and services

DDoS mitigation solutions are best supported by regular activeDEFENCE DDoS Testing Services to ensure on-going efficiency and certify that staff are well-trained on the best response to a DDoS attack. Web-application servers would also benefit from regular activeDEFENCE Vulnerability Assessments and status monitoring to ensure that they are not compromised by changes to the web application configuration at any stage.
