

Optimising Active Directory® Uptime

Disaster Recovery and State Management for Active Directory®

Active Directory® is subject to failures due to human errors, malicious activity or hardware failures.

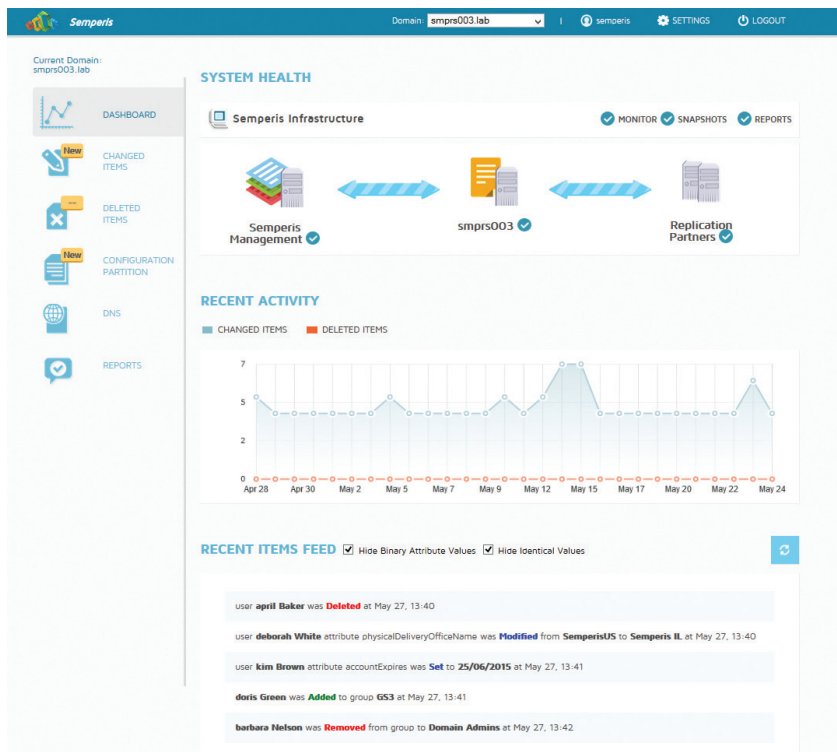

These failures can have devastating business consequences. This solution for Active Directory® (AD) IAM introduces automation thus enabling enterprises to mitigate risk and business disruption.

The solution suite includes a fully automated, zero-maintenance recovery service that guarantees Recovery Time Objectives (RTO) of minutes for the AD platform.

Providing full insight over all actions on the AD, these solutions enable organizations to analyze AD states in real-time and reverse changes granularly or restore the entire AD Forest when required.

KEY BENEFITS

- 100% automated AD Forest recovery
- Regulation and SLA satisfaction
- Zero maintenance
- Dependent services recovery
- Minimizing business disruption and down-time
- Insights on Active Directory activities
- Real-time comparison and restoration of AD states
- Granular recovery of a single attribute

3 EASY STEPS TO RECOVER FROM ACTIVE DIRECTORY DISASTER

1. Select Scenario
2. Select Recovery Point
3. Click Recover

Optimising Active Directory® Uptime through Insight

Full Forest Recovery

These solutions are the only fully automatic, zero touch services with guaranteed RTO of minutes.

Recover from database corruptions, schema extension failures and malicious activities within minutes through a three-click process.

State Management

The solution tracks AD changes, allows real-time change analysis and roll back without any downtime.

Compare AD previous states to live or compare any two previous points in time by using instant view of the recent changes and immediately revert as necessary.

Single Object and Attribute Level Recovery

The "Active Directory Revert" operation enables you to granularly recover any attribute or objects to any point in time.

Dependent Services Recovery

Recover Active Directory based mission critical services such as Domain Name Services (DNS), Public Key Infrastructure (PKI) components and Dynamic Host configuration Protocol (DHCP).

Secured Web Based Administration Interface

Securely access from any organisational workstation eliminating the need for designated software.

Group Policy (GPO) Restoration

Gain insights and recover Group Policy (GPO) data from Corruption or accidental modification.

PROTECT YOUR ENVIRONMENT

Gartner ranks tiers of application protection levels ranging from mission critical, critical and important, setting different uptime requirements based on the organizational necessity. Active Directory® (AD), used by 90% of the enterprises as their organizational identity platform, is ranked as a tier "0" application leading to no tolerance of downtime.

SAAS RESOURCES DEPEND ON ACTIVE DIRECTORY®

Adoption of SaaS applications makes AD uptime even more critical, since the authentication and authorization of SaaS resources depend on AD extended SSO (ADFS®). In other words - AD down? Means no access to Salesforce, Office 365 and any cloud application with SSO.

This solution provides a recovery solution for your Active Directory® with a guaranteed recovery time objective of minutes, allowing you to increase the SLA of the data center in no time!
