

Public Cloud Security

Assess, Remediate and Control Security for Every Public Cloud

The activereach public cloud is an innovative SaaS platform that allows enterprises to easily manage the security and compliance of their public cloud environments at any scale across Amazon Web Services (AWS), Microsoft Azure and Google Cloud Platform (GCP). activereach offers technologies to visualize and assess security posture, detect misconfigurations, model and actively enforce gold standard policies, protect against attacks and insider threats, cloud security intelligence for cloud intrusion detection, and comply with regulatory requirements and best practices. Businesses use our service for faster and more effective cloud security operations, pain-free compliance and governance, and Rugged DevOps practices.

Why the biggest companies utilizing cloud infrastructure choose this solution

activereach uses a force multiplier that saves customers time and money with training on one tool with a unified single view across a multi-cloud environment.

It is a comprehensive security and compliance orchestration platform that provides end-to-end security lifecycle management across accounts, regions, and clouds.

activereach goes beyond monitoring and assessment, providing active protection for the continuous enforcement and maintenance of a customers established security baseline.

The activereach public cloud SaaS platform is the only cloud security platform that itself is certified in meeting ISO 27001, SOC 2 Type II, and PCI DSS attestation.

BUILT FOR

and others

PRODUCT AT A GLANCE:

- Security Operations:** Visualize assets, assess security posture, fix misconfigurations and threats, manage the cloud firewall, and enforce security from a single source of network authority. 
- Advanced IAM Protection:** Protect against compromised credentials and identity theft using a cloud's native IAM capabilities to safeguard access to actions that can have a big impact. 
- Compliance and Governance:** Manage the compliance lifecycle for standards such as PCI DSS, from automated data aggregation and assessment to remediation and reporting. 
- Cloud Security Intelligence:** activereach provides cloud-native security intelligence technology that delivers cloud intrusion detection, network traffic visualization and user activity analytics. 

Key features and Benefits

Agentless, Cloud-native Architecture for Today's Cloud

The activereach public cloud platform uses the native security controls provided by public clouds to protect all cloud resources, including built-in services such as AWS RDS, GCP compute engine instances, and Azure LBs, meeting the needs of today's public clouds that agent-based solutions cannot address. It allows you to protect multiple cloud environments by combining cloud-agnostic policy automation with cloud-native security capabilities. You can specify policies once across multiple clouds, and the system uses underlying cloud controls to implement the policy on each cloud.

Faster Time-to-Value with the activereach public cloud SaaS Platform

With no software to install and no agents to manage, you can secure your environment with activereach in under five minutes. You never have to worry about software updates and scaling problems. Our public cloud security platform integrates with your AWS accounts leveraging innovative cross-account trust policy to gather security information, rather than sharing keys and credentials.

Remediate in Place - Find It, Fix It, Stay Fixed

The activereach public cloud is not just a monitoring solution. In addition to powerful visualization capabilities that allow you to review security posture in real-time to discover any vulnerabilities, compromised workloads, open ports or misconfigurations, activereach's public cloud also allows administrators to take the necessary actions to rapidly mitigate risk through remediation from a single platform. No more patchwork of tools needed for monitoring, remediation, or enforcement, thus bringing agility to the security and compliance lifecycle.
